DOME SOLAR ENTERS UK MARKET WITH UNIQUE ROOFTOP SOLAR PANEL MOUNTING SYSTEMS

Dome Solar is showcasing for the first time in the UK at the Solar Energy UK Show its innovative and highly successful approach to rooftop solar panel mounting systems.

A leading supplier of mounting systems in the French market, we are now introducing to the UK our uniquely intuitive components and tailored technical expertise, which together significantly reduce customers' installation time and investment.

Our patented, streamlined pre-mounted clamps combine a spring action with highest quality materials and manufacturing processes to provide an unparalleled ease of use. We also offer customers precise guidance on how to lay solar panels on both flat and sloped roofs to guarantee the durability and effectiveness of their project.

By helping our customers plan the lay-out of an installation we ensure they make the most efficient use of components and man-hours: Dome Solar's system allows just 2 members of staff to install 150-180 solar panels per day.

For this reason Dome Solar has built an impressive customer base in its home market of France among suppliers and large companies in the retail, agricultural, industrial and public sector since its foundation in 2008. Dome Solar's clients include Vinci, Suez, Casino supermarkets, Caudalie cosmetics, and Chateau Lafitte.

Dome Solar is showing its versatile, photovoltaïque mounting systems at stand I39.

About Dome Solar:

Based in Nantes, Dome Solar has established since its foundation in 2008 a reputation as a leading provider of rooftop solar panel mounting systems to the French market.

Come to our stand no. I39 for insights into how our tailored approach is transforming solar roof panel installation, or call Miss Carteau Marine to arrange an interview.
